

Community Update

White Hill wind farm plan to extend the met mast that is currently on site, pending suitable weather conditions.

The current met mast is at 80 meters height. It collects wind speeds, wind direction, temperature etc. which is used to predict and analyse further the energy the wind farm can produce.

This will be extended with an additional 20 meters and an aviation light as in agreement with obtained planning.

If you require any further information or have any queries in relation to this or any part of the project please contact us on:
